

IMPORTANT – STORAGE INSTRUCTIONS

In order to achieve maximum results, please follow these storage recommendations when your medication is delivered.

If your prescription is for more than one vial of medication, please do the following three items.

1. Store one vial at normal refrigeration temperature (32 – 39F). 

This is the vial being actively used. (*For convenience, Olympia's Trimix can be stored at room temperature for short periods of time while in use. However, every effort should be made to keep the medication refrigerated or frozen. When traveling, TriMix can be transported with an ice pack.)

2. The remaining vials should be placed in freezer and kept frozen (0 – 31F) 

(*Frozen vials have a beyond use date of up to one year)

3. When the refrigerated vial (the active vial) becomes low on medication, remove one vial from the freezer and place in the refrigerator.

This vial will become the active vial when the original vial is empty. Do this each time the active vial is low on medication. When only one vial of medication remains in the freezer, it is time for a prescription refill.

TriMix is shipped with ice packs. It is normal for the ice packs to melt and the medication to arrive unfrozen or even slightly warm. The effectiveness of the medication is not compromised.

Trimix is shipped overnight to ensure stability and optimum results.

Olympia's pharmacists are available to answer questions regarding your prescription, M – F 9am to 6pm.

WE SINCERELY APPRECIATE YOUR BUSINESS! QUESTIONS OR COMMENTS?
