

Andropause is often called the “male menopause.” As men age, their bodies produce less and less testosterone. This lack of testosterone can lead to a number of symptoms that many men just accept as the “normal aging process”. A lot of men do not realize that these symptoms can be reduced or eliminated through **testosterone replacement therapy (TRT)**.

Numerous changes are associated with an age-related decline in testosterone. Men can go through these changes quickly, with a sudden change, or more typically, slowly over a period of time, with a gradual hormone decline. Men can start this decline as early as their 30's, when the body's production of testosterone starts to drop by **1 – 2%** each year.

In the United States, it has been stated that there are over 25 million men (about 408 million worldwide) between the ages of 40 and 55 that may be going through what is termed “male menopause”, or “**Andropause**”. In the next twenty years, the number in the US is expected to increase to over 57 million (960 million worldwide).

Testosterone

- Testosterone Cypionate- 200mg/ml 5ml, 10ml MDV (available in sesame or grapeseed oil formulas)
- Testosterone Cypionate EO- 300mg/ml 3ml MDV
- Testosterone Enanthate- 200mg/ml 10ml MDV
- Testosterone Cypionate- 160mg /propionate 40mg 10ml MDV
- Testosterone Cream- 5% / 10% / 20%
- Testosterone Sublingual
- Anastrozole Capsules

HCG

- HCG 10,000 iu
- HCG 5,000 iu
- HCG 2,000 iu
- HCG Sublinguals
